

2010 Tanner Street Utility Replacement Project

Project Update No. 10

November 22, 2010

During the past week, PACT Construction continued installing the new 48 inch diameter concrete storm sewer piping and structures along Tanner Street between Stiles Avenue and Clement Street. In order to ensure that all conflicts between the new storm sewer piping and existing underground utilities were resolved, they also worked on installing new sanitary sewer laterals between Clement Street and Kings Highway East. Although there were some minor rain delays during the week, the Contractor installed approximately 170 linear feet of new 48 inch concrete storm sewer pipe, one (1) new storm sewer structure, and fifteen (15) sanitary sewer laterals.
