

2010 Tanner Street Utility Replacement Project

Project Update No. 11

November 29, 2010

During the holiday shortened Thanksgiving week, PACT Construction concentrated on cleaning the project for the tree lighting event on November 26th and installed storm sewer structures at the Clement Street intersection. These new structures included several new inlets that will collect the storm water runoff from a large area of the Central Business District between Clement Street and Kings Highway East. The collection of this storm water at Clement Street will reduce the amount of water running down Tanner Street that in the past has contributed to flooding issues at the Library Point area.

After the long holiday weekend, PACT Construction will continue installing new storm sewer piping along the roadway between Clement Street and Kings Highway East.
