

2010 Tanner Street Utility Replacement Project

Project Update No. 12

December 6, 2010

After the long Thanksgiving weekend, PACT Construction continued installing the new 48 inch diameter storm sewer piping from Clement Street to Kings Highway East. Although all work on Wednesday was rained out, the Contractor was able to install approximately 350 linear feet of new 48 inch diameter piping and start installing the necessary structures and piping at Kings Highway East to connect to the existing storm sewer piping beneath the roadway.

For the upcoming week, PACT Construction will complete the connections to the existing storm sewer at Kings Highway East. They will also work on completing the remaining at Clement Street and Wilkins Street.
