

Lane of Acres Drainage Improvements

Project Update No. 3

November 29, 2010

During the Thanksgiving Holiday week, the Contractor was able to complete the new storm sewer inlets and piping at the end of Lane of Acres and install new concrete curb along sections of the private driveway near the repaired storm sewer outfall. They also repaired the existing stone outfall that slows the discharge of the storm water runoff as it exits the new piping system.

View of the Cul-de-Sac Area Prior to Repaving the Roadway

During the upcoming week, the Contractor plans to complete preparations for paving both the roadway and the private driveway. They also plan on cleaning up the site and working on restoring the areas disturbed during the construction activities.
